## **Claims**

- 1. A method of obtaining a natural product from green plant oleoresin, the method comprising:
  - (a) saponifying green plant oleoresin to provide a saponified resin;
- (b) contacting the saponified resin with a first volatile organic solvent to provide a suspension;
  - (c) removing the solids from the suspension to provide a solution;
  - (d) condensing the solution to provide a first oil; and
- 10 (e) contacting the first oil with a second volatile organic solvent to solidify the natural product.
  - 2. The method of claim 1 wherein the natural product is in a crystalline form.
- 15 3. The method of claim 1 wherein the natural product comprises a mixture of lutein and zeaxanthin.
  - 4. The method of claim 1 wherein the natural product comprises a mixture of lutein crystals and zeaxanthin crystals.

20

- 5. The method of claim 1 wherein the natural product comprises at least about 80 wt.% xanthophylls.
- 6. The method of claim 1 wherein the natural product comprises about 80 wt.% to about 85 wt.% xanthophylls.
  - 7. The method of claim 1 wherein the natural product comprises about 70 wt.% to about 80 wt.% lutein.
- 30 8. The method of claim 1 wherein the natural product comprises about 5 wt.%

to about 10 wt.% zeaxanthin.

5

- 9. The method of claim 1 wherein the natural product comprises about 70 wt.% to about 80 wt.% lutein and about 5 wt.% to about 10 wt.% zeaxanthin.
- 10. The method of claim 1 wherein the natural product comprises less than about 20 wt.% fatty acids.
- 11. The method of claim 1 wherein the natural product comprises trans lutein.
  - 12. The method of claim 1 wherein the natural product comprises trans lutein that is at least about 50 wt.% pure.
- 13. The method of claim 1 wherein the natural product comprises trans lutein that is about 50 wt.% to about 90 wt.% pure.
  - 14. The method of claim 1 wherein at least about 0.5 pounds of natural product is obtained.
- 20 15. The method of claim 1 wherein the green plant oleoresin is obtained from alfalfa, clove, kale, spinach, squash, black bean tops, sea-weed, leafy green vegetable, or any combination thereof.
- 16. The method of claim 1 wherein the green plant oleoresin is obtained from 25 alfalfa.
  - 17. The method of claim 1 wherein the saponifying employs a saponification agent that is an alkali metal hydroxide or an alkaline earth metal hydroxide.
- 30 18. The method of claim 1 wherein the saponifying employs a saponification

agent selected from the group of sodium hydroxide (NaOH), potassium hydroxide (KOH), and a combination thereof.

- 19. The method of claim 1 wherein the saponifying employs about 40 wt.%
  5 aqueous potassium hydroxide (KOH).
  - 20. The method of claim 1 wherein the saponifying is carried out in the absence of an alcohol.
- 10 21. The method of claim 1 wherein the saponifying employs a saponification agent in an amount sufficient to maintain the pH during the saponifying at about 10 to about 14.
- 22. The method of claim 1 wherein the saponifying employs a saponification agent in an amount sufficient to maintain the pH during the saponifying at about 11.5 to about 12.0.
  - 23. The method of claim 1 wherein the saponifying employs a solvent system selected from the group of water, ethanol, methanol, propanol, and any combination thereof.
    - 24. The method of claim 1 wherein the saponifying employs a solvent having at least one hydroxyl group.
- 25 25. The method of claim 1 wherein the saponifying is carried out between about 60°F and about 180°F.
  - 26. The method of claim 1 wherein the saponifying is carried out between about 120°F and about 160°F.

- 27. The method of claim 1 wherein the saponifying is carried out for at least about 30 min.
- 28. The method of claim 1 wherein the saponifying is carried out for about 30 min to about 90 min.
  - 29. The method of claim 1 wherein the volatile organic solvent comprises a compound having at least one carbonyl (C=O) group.
- 10 30. The method of claim 1 wherein the volatile organic solvent comprises methyl ethyl ketone (MEK), ethyl acetate, acetone, or any combination thereof.

25

31. The method of claim 1 wherein the volatile organic solvent comprises a compound having at least one ketone group.

32. The method of claim 1 wherein the first volatile organic solvent comprises acetone.

- 33. The method of claim 1 wherein the first volatile organic solvent is employed in an amount of about 25:1 (vol/vol) to about 800:1 (vol/vol) of first volatile organic solvent to saponified resin.
  - 34. The method of claim 1 wherein the first volatile organic solvent is employed in an amount of about 50:1 (vol/vol) to about 500:1 (vol/vol) of first volatile organic solvent to saponified resin.
  - 35. The method of claim 1 wherein the saponified resin is contacted with the first volatile organic solvent having a temperature of about 60°F to about 120°F.
- 36. The method of claim 1 wherein the solids are removed from the suspension

by decantation, filtration, centrifugation, or any combination thereof.

5

- 37. The method of claim 1 wherein the second volatile organic solvent is a solvent system wherein carotene, xanthophylls and chlorophyllins are more soluble than lutein and zeaxanthin, at a ratio of about 10:1 (vol/vol) to about 2,000:1 (vol/vol) of second volatile organic solvent to first oil, at a temperature of about 50°F to about 130°F.
- 38. The method of claim 1 wherein the second volatile organic solvent is a solvent system wherein carotene, xanthophylls and chlorophyllins are more soluble than lutein and zeaxanthin, at a ratio of about 100:1 (vol/vol) of second volatile organic solvent to first oil, at a temperature of about 72°F.
- 39. The method of claim 1 wherein the second volatile organic solvent is a binary solvent system.
  - 40. The method of claim 39 wherein the binary solvent system comprises a halogenated organic solvent in which lutein is relatively soluble, and a second organic solvent in which the lutein is relatively insoluble.
- 41. The method of claim 40 wherein the halogenated organic solvent comprises chloroform.
- 42. The method of claim 40 wherein the second organic solvent is a straight chain hydrocarbon.
  - 43. The method of claim 42 wherein the straight chain hydrocarbon comprises hexanes.
- The method of claim 1 wherein the contacting of the first oil and the second

volatile organic solvent is carried out at a temperature of about -40°F to about 30°F.

45. The method of claim 1 wherein the contacting of the first oil and the second volatile organic solvent is carried out at a temperature of about -20°F to about 0°F.

5

- 46. The method of claim 1 further comprising, after the natural product is solidified, separating the natural product from the second volatile organic solvent.
- 47. The method of claim 1 further comprising, after the natural product is solidified, separating the natural product from the second volatile organic solvent by decantation, filtration, centrifugation, or any combination thereof.
  - 48. The method of claim 46 further comprising, after the natural product is separated from the second volatile organic solvent, washing the natural product with water.
  - 49. The method of claim 48 wherein the water is about 60°F to about 150°F.
  - 50. The method of claim 48 wherein the water is about 80°F to about 100°F.

20

30

- 51. The method of claim 48 further comprising, after the washing of the natural product with water, drying the washed natural product.
- 52. The method of claim 1 further comprising, before saponifying the green plant oleoresin to provide the saponified resin, extracting the green plant oleoresin from a curd employing a third volatile organic solvent.
  - 53. The method of claim 52 wherein the third volatile organic solvent is selected from the group of ethyl acetate, acetone, benzene, chloroform, cyclohexanone, dimethyl sulfoxide, ethyl ether, tetrahydrofuran, methyl tert-butylether, butyl

acetate, and combinations thereof.

54. The method of claim 52 wherein the third volatile organic solvent is ethyl acetate.

5

- 55. The method of claim 52 wherein the third volatile organic solvent is an aprotic solvent.
- 56. The method of claim 52 wherein the third volatile organic solvent is a polar solvent.
  - 57. The method of claim 52 wherein the curd is obtained from green plants comprising:
    - (a) macerating green plants to provide plant matter and juice;
- 15 (b) separating the plant matter from the juice;
  - (c) heating the juice to coagulate chloroplastic proteins into a green curd; and
    - (d) separating the green curd from the juice.
- 20 58. The method of claim 57 wherein the green plants have been macerated within about 1 day of harvesting.
  - 59. The method of claim 57 wherein the heating is carried out at a pH of about 7 to about 8.

- 60. The method of claim 57 wherein the heating is carried out at a temperature of about 135°F to about 200°F.
- 61. The method of claim 57 wherein the heating is carried out at a temperature of about 170°F to about 190°F.

- 62. The method of claim 57 wherein after the heating and before the separating, the green curd and the juice is cooled to a temperature of less than about 95°F.
- 5 63. The method of claim 57 wherein after the heating and before the separating, the green curd and the juice are cooled to a temperature of less than about 80°F.
  - 64. The method of claim 57 wherein the green curd is separated from the juice by decantation, filtration, centrifugation, or any combination thereof.
  - 65. The method of claim 57 further comprising, after separating the green curd from the juice, drying the green curd.

- 66. The method of claim 65 wherein the drying is carried out at a temperature of less than about 180°F.
  - 67. The method of claim 65 wherein the drying is carried out at a temperature of less than about 150°F.
- 20 68. The method of claim 57 wherein more than about 10,000 pounds of green plants are macerated to provide plant matter and juice.
  - 69. The method of claim 57 wherein at least about 200,000 pounds of green plants are macerated to provide the plant matter and juice.
  - 70. A method of obtaining a natural product from a green plant, the method comprising:
    - (a) macerating the green plant to provide plant matter and juice;
    - (b) separating the plant matter from the juice;
- 30 (c) heating the juice to coagulate chloroplastic proteins into a green curd;

- (d) separating the green curd from the juice;
- (e) optionally drying the green curd;
- (f) extracting a green plant oleoresin from the green curd employing a first volatile organic solvent;
  - (g) saponifying the green plant oleoresin to provide a saponified resin;
- (h) contacting the saponified resin with a second volatile organic solvent to provide a suspension;
  - (i) removing the solids from the suspension to provide a solution;
  - (j) condensing the solution to provide a first oil;
- 10 (k) contacting the first oil with a third volatile organic solvent to solidify the natural product;
  - (l) separating the natural product from the third volatile organic solvent;
  - (m) optionally washing the natural product with water; and
  - (n) optionally drying the washed natural product.

5

- 71. A natural product obtained from the process of claim 1.
- 72. A natural product obtained from the process of claim 1, wherein the natural product is acceptable for human consumption.

- 73. A pharmaceutical formulation comprising a pharmaceutically acceptable carrier and the natural product of claim 71.
- 74. The pharmaceutical formulation of claim 73 that is in the form of a powder,25 tablet, capsule, gel, liquid or solid.
  - 75. The pharmaceutical formulation of claim 73 further comprising at least one of a vitamin and a mineral.
- The pharmaceutical formulation of claim 73 further comprising alpha

carotene, beta carotene, vitamin A, or any combination thereof.

77. A neutraceutical formulation comprising a neutraceutically acceptable carrier and the natural product of claim 71.

5

- 78. The neutraceutical formulation of claim 77 that is in the form of a powder, tablet, capsule, gel, liquid or solid.
- 79. The neutraceutical formulation of claim 77 further comprising at least one of a vitamin and a mineral.
  - 80. The neutraceutical formulation of claim 77 further comprising alpha carotene, beta carotene, vitamin A, or any combination thereof.
- 15 81. A cosmetic formulation comprising a cosmetically acceptable carrier and the natural product of claim 71.
  - 82. The cosmetic formulation of claim 81 that is in the form of a powder, tablet, capsule, gel, liquid or solid.

- 83. The cosmetic formulation of claim 81 further comprising at least one of a vitamin and a mineral.
- 84. The cosmetic formulation of claim 81 further comprising alpha carotene,beta carotene, vitamin A, or any combination thereof.
  - 85. The natural product of claim 71 for use in medical treatment.
- 86. A method for treating an ulcer comprising administering an amount of the natural product of claim 71 effective to treat the ulcer.

- 87. A method for treating cancer comprising administering an amount of the natural product of claim 71 effective to treat the cancer.
- 5 88. A method for treating heart disease comprising administering an amount of the natural product of claim 71 effective to treat the heart disease.
  - 89. A method for treating a macular degeneration comprising administering an amount of the natural product of claim 71 effective to treat the macular degeneration.
  - 90. A dietary supplement that comprises the natural product of claim 66.

15

- 91. The dietary supplement of claim 90 that is admixed with a food product.
- 92. The dietary supplement of claim 91 wherein the food product is a beverage.
- 93. The dietary supplement of claim 91 wherein the food product is orange juice.
- 94. The dietary supplement of claim 91 wherein the food product is a sport drink or a health bar.
- 95. A natural product obtained by the process comprising:
- 25 (a) saponifying green plant oleoresin to provide a saponified resin;
  - (b) contacting the saponified resin with a first volatile organic solvent to provide a suspension;
    - (c) removing the solids from the suspension to provide a solution;
    - (d) condensing the solution to provide a first oil; and
- 30 (e) contacting the first oil with a second volatile organic solvent to solidify

## the natural product.

- 96. A natural product obtained by the process comprising:
  - (a) macerating green plants to provide plant matter and juice;
- 5 (b) separating the plant matter from the juice;
  - (c) heating the juice to coagulate chloroplastic proteins into a green curd;
  - (d) separating the green curd from the juice;
  - (e) optionally drying the green curd;
- (f) extracting a green plant oleoresin from the green curd employing a first volatile organic solvent;
  - (g) saponifying the green plant oleoresin to provide a saponified resin;
  - (h) contacting the saponified resin with a second volatile organic solvent to provide a suspension;
    - (i) removing the solids from the suspension to provide a solution;
- (j) condensing the solution to provide a first oil;
  - (k) contacting the first oil with a third volatile organic solvent to solidify the natural product;
    - (1) separating the natural product from the third volatile organic solvent;
    - (m) optionally washing the natural product with water; and
- 20 (n) optionally drying the washed natural product.
